

## BAPI WIRELESS IMMERSION TEMPERATURE TRANSMITTER BA/WT-I

### DESCRIPTION

The **BAPI wireless immersion temperature transmitter BAWT-I-4** sense in-pipe conditions and send data with a battery operated 418 MHz transmitter. The sensor / transmitter is mounted in a NEMA 4 (IP66) enclosure with a 1/2" NPT stainless steel temperature immersion probe suited for four inch well insertion. The transmitter has an open air range of 100 feet. The battery has an estimated eight-year life with transmission updates approximately every 10 seconds. Other immersion probe lengths are available.

### OPERATION/APPLICATION

Temperature data is transmitted via 418 MHz to a receiver. Minimum open air range is 100 feet, and battery life is estimated to be eight years with high-capacity 3.6 VDC lithium batteries (at a 10-second transmit interval). Each transmitter has a unique address and includes built-in error detection. Each variable sent by the transmitter is converted by a BAPI analog output module to a voltage, current, or resistance signal for input to a controller or monitor. The unit can also be set up to send low-battery information to the controller.

### FEATURES

- **Wireless temperature sensing**
- **Eight-year battery life**
- **Built-in error detection**
- **Repeater available for 1000-foot range**
- **Output modules available with voltage, current, or resistance outputs**
- **Stainless steel temperature probe**
- **Standard 316-stainless steel wells available**
- **Two-year warranty**

### DIMENSIONS AND WIRING

**Note:** Batteries included

### INSTALLATION / MOUNTING

Install the probe horizontally or vertically at the highest practical elevation into the pipe. The enclosure should not be installed inside a metal box or inverted. Installing the batteries starts the wireless transmission immediately. Pushing the button of the transmitter and the button of the associated output module simultaneously will establish an address link between the two units. This should be done one at a time to avoid cross-addressing.
