Functional Description

1. ON DELAY [0]
Timing commences when supply is present.R energizes at the end of the timing period.

2. CYCLIC OFF/ON {OFF Start, (Sym, Asym)} [1]
T-ON and T-OFF can be same or different. The relay(R) keeps on changing its status till power is removed.

3.CYCLIC ON/OFF{On Start,(Sym,Asym)} [2]
This function is quite similar to the function '1' but initially the relay(R) is ON for period T-ON after the power is applied.

4.IMPULSE ON ENERGIZING [3]
After power ON, R energizes and timing starts. R de-energizes after timing is over.

5.ACCUMULATIVE DELAY ON SIGNAL [4]
Time commences as supply is present and switch B1 is open. Closing switch B1 pauses timing. Timing resumes when switch B1 is opened again. R energizes at the end of timing.

Important Note:

1. Output de-energizes when device enters into PROGRAM MODE and starts new cycle after coming out of PROGRAM MODE.
2. Loads which have current requirement > 1mA, can only be used as Optional Load. For e.g. Contactor Coil, AC Relay Coil, etc.

6. ACCUMULATIVE DELAY ON INVERTED SIGNAL [5]
Time commences as supply is present and switch B1 is closed. Opening switch B1 pauses timing. Timing resumes when switch B1 is closed again. R energizes at end of timing.

7. ACCUMULATIVE IMPULSE ON SIGNAL [6]
When supply is ON, R energizes. When switch B1 is closed timing is suspended and remains suspended till switch B1 is opened again. Interrupting supply resets timer.

8. SIGNAL ON DELAY [7]
Permanent supply required. Timing starts when switch B1 is closed. R energizes at end of timing period and de-energizes when B1 is opened.

9. INVERTED SIGNAL ON DELAY [8]
Timing will commence when supply is present and switch B1 is open. R energizes after timing .If B1 is closed during timing period, timing resets to the beginning of cycle.

10. SIGNAL OFF DELAY [9]
Permanent supply is required. R energizes when switch B1 is closed. Timing commences after S is opened and then the relay de-energizes.

11. IMPULSE ON/OFF [A]
Permanent supply is required. R energizes for the timing period when B1 is opened or closed. When timing commences, changing state of B1 does not affect R but resets timer.

12. SIGNAL OFF/ON [b]
When switch B1 is closed or opened for preset time ,T, the relay changes its state after time duration T.

13. LEADING EDGE IMPULSE 1 [C]
A permanent supply is needed. When B1 is closed, output relay energizes until timing irrespective of any further action of B1.

14. LEADING EDGE IMPULSE 2 [d]
Permanent supply is required. when switch B1 is closed, and remains closed output relay energizes until timing is over. If B1 is opened during timing, R resets.

15.TRAILING EDGE IMPULSE 1 [E]
Permanent supply required. when B1 is opened, R energizes and de-energizes when timing is over. If B1 is closed during timing R resets.

16. TRAILING EDGE IMPULSE 2 [F]
Permanent supply is required. When switch B1 is opened, R energizes and will de-energize when timing is over. If B1 is pulsed during timing period it will have no effect on R.

17. DELAYED IMPULSE [G]
when switch B1 is closed, T_{OFF} starts. Relay energizes at the end of T_{OFF} period. Then, T_{ON} starts irrespective of signal level and relay de-energizes at the end of T_{ON} period.
