

CABLE RETRIEVAL SYSTEM MAGNEPULL XP1000 SERIES

DESCRIPTION

Magnepull is the most advanced cable retrieval system on the market today. Using powerful rare earth magnets, **Magnepull** works through drywall, insulation, and carpet to pull wire more quickly and easily than the old fish-tape method. **Magnepull** is designed for commercial or residential installation of HVAC and building automation cable, satellite TV, home theater, security, thermostat or telecom wire and makes a wiring project a one-man job.

The **XP1000-3** bullet drop magnet with leader and drop chain comes with the **XP1000-LC** system. Other drop magnets such as the **XP1000-3-1** (without leader, for confined spaces), **XP1000-4** (with 8/32" threaded stud), and **XP1000-6** (1/2" diameter bullet for smaller wires, also has the 8/32" threads) are also available.

The **MS800-1** Magnespot is used to locate a reference marker through sheetrock, ceilings or floorings.

FEATURES

- *Revolutionary time-saving tool*
- *Smooth rolling design prevents wall damage*
- *Easy to use in tight places*
- *One year warranty*
