

## PX3 Series

Differential Pressure / Air Velocity Transducer

### Product Overview

The PX3 transducer can measure either air pressure or velocity with the flip of a switch. The PX3 is available in three installation configurations: duct, panel or universal. Duct and panel models have two pressure and velocity options: 0-1" WC / 0-3,000 ft/min or 1-10" WC / 3,000-6,000 ft/min with four field-selectable sub-ranges. The universal model comes in one pressure/velocity range: 0-10" WC / 0-7,000 ft/min with seven field-selectable sub-ranges for pressure and eight for velocity. All variants are available with and without display. The PX3 has an IP65/NEMA 4 environmental rating and a 5-year limited warranty.

### Installation, Wiring & Configuration

1. Plan the installation. Panel or duct mount?

Note: Velocity measurement requires the use of an AA18, AA19 or AA20 pitot tube (sold separately).

2. For duct mount applications, thread the probe into the back of the device housing, as shown in the dimensional drawing.  
 3. Configure the internal tubing for the selected installation method as described below.

Duct mount tubing configuration:

- Connect the right-side tube to the rear brass barb marked as "-" on the underside of the device housing.
- Connect the left-side tube to the probe in the back of the device housing.

Panel mount tubing configuration:

- Connect the right-side tube to the rear brass barb marked as "-" on the underside of the device housing.
- Connect the left-side tube to the front brass barb marked as "+" on the underside of the device housing.

**Installation, Wiring  
& Configuration (cont.)**

- Connect the transmitter to the control system and power supply as indicated below. Optional: Connect the ZERO terminals to the digital output (contact closure) of the control system.

**2-wire, 4-20 mA Current Loop Output**

**3-wire, 0-5 V/0-10 V Voltage Output**

- Wait five seconds, then press and hold the ZERO pushbutton for two seconds or provide contact closure on the AUX ZERO terminal. This will reset the output and display to zero pressure. For best accuracy, press the ZERO button while both ports are open to atmospheric pressure. To protect the unit from accidental zero, this feature is enabled only when the detected pressure is within about 0.1 in. WC (25 Pa) of factory calibration.
- Connect desired external tubing to the PX3.

**Operation**

PX3 Series devices employ ceramic capacitive sensors and sophisticated temperature compensation circuitry. The sensor achieves its best accuracy after an initial warm-up period. During the first few minutes of operation, readings at zero pressure and the lowest pressure ranges appear erroneous. Following this initial warm-up period, the PX3 device maintains its specified accuracy and stability.

The LCD momentarily indicates range 'SET' when a selection is made. Pressure is normally indicated on the display. Units are in inches water column (in. WC), Pascals (Pa) or kilopascals (kPa) as indicated on the display. The display shows 'OVER' when the pressure is over range.
